DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "first conductive portion having a concave portion connecting to said hole, and said one electrode formed along an inner wall surface of said concave portion" of claim 4 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
 - a. In the drawings, the "concave portion" is referred to as item 13a. If so, the one electrode cannot be formed along the inner wall of the concave portion, because the concave portion would be the innermost element of the capacitor structure.

Art Unit: 2815

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Jenq (U.S. Patent No. 6,303,430 B1).

In re claim 1, Jenq (Figs. 6H – 6L) discloses a semiconductor device comprising:

A first conductive layer (40);

An insulation layer (46) formed on said first conductive layer and having a hole reaching said first conductive layer, wherein

Said hole has a first portion and a second portion having diameters different from each other, the diameter of said hole discontinuously changes at a boundary (near the boundary of insulation layers 46 and 48) between said first portion and said second portion; and

One electrode of said capacitor (500µ tungsten layer; column 5, lines 54-56) formed along an inner wall surface of said hole and electrically connected to said first conductive layer.

In re claim 2, Jeng discloses the device of claim 1, wherein

Said insulation layer has a first insulation layer (46) and a second insulation layer (48) formed on said first insulation layer,

Said first portion of said hole is formed in said first insulation layer, and

Said second portion of said hole is formed in said second insulation layer and has a diameter larger than a diameter of said first portion.

In re claim 3, Jenq discloses the device of claim 1, further comprising:

A second conductive layer (300µ tungsten layer; column 5, lines 51-53) located between said first conductive layer (500µ tungsten layer) and said one electrode and electrically connected to both of said first conductive layer and said one electrode (40).

3. Claims 1, 2 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Huang et al. (U.S. Patent No. 5,315,141).

In re claim 1, Kim (Fig. 2F) discloses a semiconductor device comprising:

A first conductive layer (6);

An insulation layer (9) formed on said first conductive layer and having a hole reaching said first conductive layer, wherein

Said hole has a first portion and a second portion having diameters different from each other, the diameter of said hole discontinuously changes at a boundary between said first portion and said second portion; and

One electrode of said capacitor (13) formed along an inner wall surface of said hole and electrically connected to said first conductive layer.

In re claim 2, Kim discloses the device of claim 1, wherein

Said insulation layer has a first insulation layer (9) and a second insulation layer (11) formed on said first insulation layer,

Said first portion of said hole is formed in said first insulation layer, and

Said second portion of said hole is formed in said second insulation layer and has a diameter larger than a diameter of said first portion.

Art Unit: 2815

In re claim 4, as best understood, Kim discloses the device of claim 1, wherein Said first conductive layer has a concave portion connecting to said hole, and said one electrode is formed along an inner wall surface of said concave portion.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jesse A. Fenty whose telephone number is 571-272-1729. The examiner can normally be reached on 5/4-9 1st Fri. Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tom Thomas can be reached on 571-272-1664. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
